58 // =====
59 // ===== function declaration =====
60 // =====
61
62 // ===== getDimensions =====
63 // This function prompts the user for three dimensions
64 // of the swimming pool.
65 //
66 // Input:
67 // Width, length, and pool.
68 //
69 // Output:
70 // Width, length, and pool.
71 // =====
72 void getDimensions(float& width, float& length, float& depth)
73 {
74     cout << left;
75     cout << setw(7);
76
77     cout << "Width: ";
78     cin >> width;
79
80     cout << "Length: ";
81     cin >> length;
82
83     cout << "Depth: ";
84     cin >> depth;
85
86     cout << right;
87 } // END - getDimensions()
88 // =====
89
90
91
92
93 // ===== areValid =====
94 // This function checks if the dimensions are valid.
95 //
96 // Input:
97 // Width, length, and depth.
98 //
```

```
99 // Output:
100 // Validity status of the dimensions given.
101 // =====
102 bool areValid(float width, float length, float depth)
103 {
104     return (((width > 5) && (width < 20)) &&
105             ((length > 5) && (length < 100)) &&
106             ((depth > 1) && (depth < 12)));
107 } // END - areValid()
108 // =====
109
110
111
112
113 // ==== calcVolume =====
114 // This function calculates the volume of the pool.
115 //
116 // Input:
117 // Width, length, and depth.
118 //
119 // Output:
120 // Volume.
121 // =====
122 float calcVolume(float width, float length, float depth)
123 {
124     return width * length * depth;
125 } // END - calcVolume()
126 // =====
127
128
129
130
131 // ==== displayVolume =====
132 // This function displays the volume of the pool.
133 //
134 // Input:
135 // Volume.
136 //
137 // Output:
138 // Volume.
139 // =====
140 void displayVolume(float volume)
141 {
142     cout << "The volume is " << volume << " cubic feet.";
143 } // END - displayVolume()
144 // =====
145 /* ===== Output =====
146 Width: 12
147 Length: 22
```

148 Depth: 8

149 The volume is 2112 cubic feet.
